

Do not install your tent when the car is on a slope.

Do not start the car engine while the tent is being assembled.

Do not lean against the tent or step on it, after the tent is installed.

Do not smoke inside the tent.

The straps and ground nails should not be fixed when re-adjusting the car location.

It is suggested that the distance from the car rear-end to the line which crosses the nearest poles should be $\geq 1.3\text{m}$.

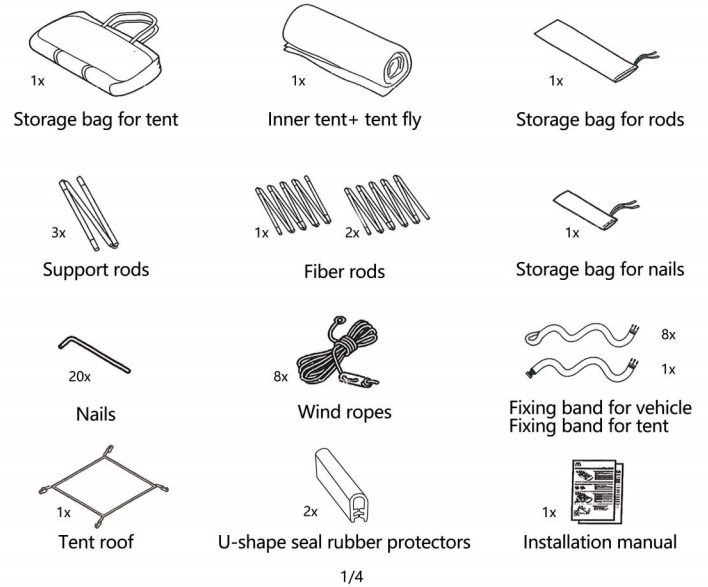

Please pull the handbrake when the car is parked.

The tent can only be installed when the car engine is turned off and the exhaust gas is not discharged.

Before assembling the tent, to add 2-pcs U-shape seal rubber protectors at the sharp corners of backdoor.

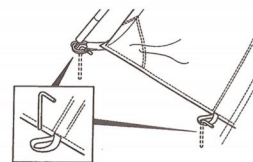

Car backdoor should be open before installing the tent, or when re-adjusting the car location.

Please keep the tent away from fire sources, and avoid inflammable, explosive items and equipment in the tent.

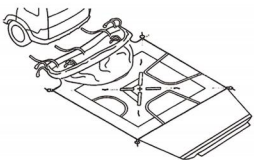

- Add 2-pcs U-shape seal rubber protectors at the sharp corners of backdoor.

Step-1

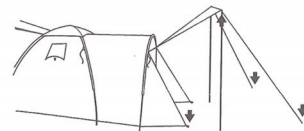

- Tighten the bottom of the tent with ground nails.
- Attach the inner tent inside the outer one using the hoops and the buttons.

Step-5

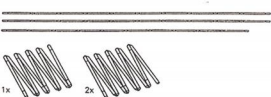

- Find a flat ground and remove all sharp objects.
- Spread out the tent on the ground.

Step-2

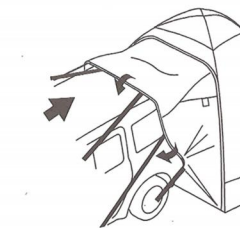

- Use 2 rods to support the entrance door and fix the ground nails.

Step-6

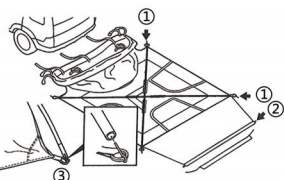

- Prepare the fiber rods (two longer and one shorter rods).

Step-3

- Drive the car backward to get it closer to the tent.
- Use the straps to fix the tent to the car at various fixing points, such as wheel caps, door handles, roof bars ...

Step-7

- Insert the two longer rods through holes ①.
- Insert the shorter rod through hole ②.
- Insert the nails that are already fastened on each corner of the tent into the end of the rods ③ while propping up the tent.

Step-4

- Add the small roof over the air vent and fasten the hooks.
- Tighten the tent with the windproof ropes and the ground nails.

Step-8
